

# FLUBA

## How to make a FLUBA

FLUBA = FLUri BALloon, invention of Hans Fluri, Switzerland

1. Put a smaller balloon into a bigger one.
2. Press the air with your hand out and put both openings onto a water tap.
3. Let the water into the small balloon, till it becomes the size of a small egg.
4. Carefully take both balloons off from the tap.
5. Tie a knot on the small balloon. This is how you transport your flubas.
6. Just before using it, blow up the bigger balloon and tie a knot on it.
